

CYAN

# AI that choreographs your post floor.

One sentence from the post supervisor, one press, and Cyan's AI runs the floor: it stages the day, reads every take, minds the rough cut, packages the hand-offs, proposes the grade and keeps the record. Every chair finds its toil already done, and signs only the doors that matter.

**Post super**  
sets the floor

**Assistant**  
stages the day

**Editor**  
rough cut, signed

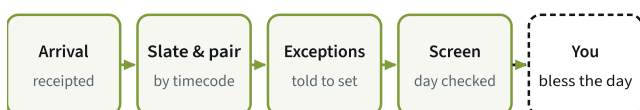

**Turnover**  
packages

**Sound**  
heard, packaged

**Colorist**  
looks, not applied

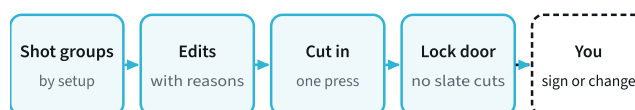

**Master**  
from your site

## ASSISTANT EDITOR The day stages itself

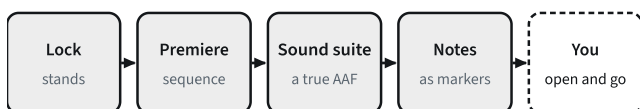

**Yours:** one glance to bless the day; the answers only set can give.

## EDITOR Rough cut minted, the film is yours

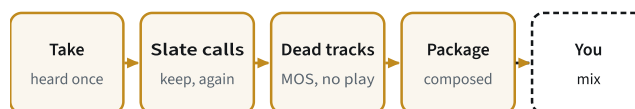

**Yours:** the fine cut in Premiere; every proposal names its takes and why.

## TURNOVER Hand-offs from the lock

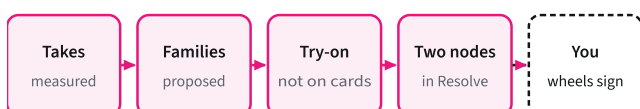

**Yours:** conform and relink follow the record to the camera originals.

## SOUND Turnover with headphones

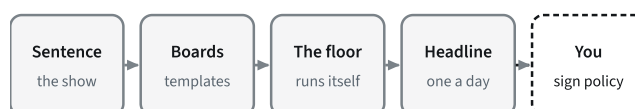

**Yours:** nothing to hunt for before the session opens.

## COLORIST The grade that asks permission

**Yours:** every look carries its reason and its measurement.

## POST SUPERVISOR Cadence, not plumbing

**Yours:** press a headline for the groups of changes, again for the signed work.

## How Cyan understands the footage

**99 % agentic,  
1 % human**

Rules settle first; a model judges only what the rules cannot; a person is asked only when neither can settle it. Every decision writes its receipt. **Plugins do the reaching:** Premiere, Resolve, Pro Tools, Frame.io and your storage connect as plugins — from the marketplace, or built by you.

### Deployment one-pager

How Cyan would sit beside your storage, in phases.
